

## Pictures As Photo Prints On Aluminum Dibond: Quality For Any Image

For our brushed aluminum pictures, your photo is printed directly on aluminum Dibond, a sturdy composite material that consists of two aluminum panels and a black polyethylene core. The face, where the brushed finish is applied, is available in two colors: silver, or our NEW gold version. This three-layer material is just 0.11 in. (3 mm) thick and low in weight. The print is cured with ultraviolet light, protecting it from light damage, dust particles, and moisture. This makes it perfect for large-format prints, even if they are displayed in sheltered outdoor areas or bathroom.
